Lab work report 9 - Norm

Cao Anh Quan - ICT Master

November 13, 2016

The employee database satisfy the 3NF because:

- There is no repeated column

- Cell contains only atomic

- Each non-key column depends on the primary key

- The columns in table depend on the primary key

There are 3 main Concepts: Customer, Order, Product. 1 Customer may have many Order and 1 Order can only belong to one Customer. 1 Product can belong to many Order and vice versa, thus we need to have one more intermediate table ProductOrder.
